Optimal production scheme and efficient business operations

- To cope with reduced demand caused by **the COVID-19 pandemic**, Japan's major steel firms have temporarily adjusted production volume with measures such as banking.
- **Ahead of the outbreak of COVID-19**, the Japanese steel industry had proceeded **structural adjustment** measures based on long term analysis.
- Based on the short and long term outlook, the Japanese steel industry has announced adjustments of steel output with **8** out of **25 blast furnaces** across Japan.

Japan's crude steel production in the past few months has fallen back to **levels observed in the global financial crisis**

Summary of findings

- **The COVID-19 pandemic** has surely led to a sharp decline in Japan's steel demand.
- Meanwhile, the Japanese steel industry has made efforts to form **an optimal production scheme** and **efficient business operations** ahead of the outbreak of COVID-19 based on long-term analysis.

Specific concerns related to the **COVID-19 pandemic** include:

- **Over-supply** in many markets caused by a large inflow of steel products
- Rising **protectionist measures** in steel trade
- **Cross-border investment** with optimistic demand forecast creating **new excess capacity**
